FOR IMMEDIATE RELEASE

Local Chiropractor Adopts State-of-the-Art Computerized Adjusting Technology

Chandler, Arizona, 5/16/13: Arizona based medical device manufacturer Neuromechanical Innovations (NMI) announces that Dr. Jack Epter has recently incorporated computerized chiropractic adjusting technology at their facility, Epter Chiropractic in Jupiter, FL using the patented Impulse iQ Adjusting Instrument®.

The instrument is called “iQ” because it is intelligent – monitoring spinal motion in real-time during each treatment. The Impulse iQ’s internal motion sensor communicates with a micro-chip computer to regulate the treatment creating more efficient treatments that are comfortable and just the right dosage. The developer of this technology, chiropractor, Dr. Chris Colloca, collaborated with biomechanists, engineers, and orthopaedic spine surgeons to conduct research on the new product before its release. Numerous research studies have been published in scientific medical and chiropractic journals on this new technology.

The technological benefits of computerized technology allow chiropractors like Dr. Epter to deliver high-tech controlled treatments that target the underlying source of patient’s pain. Conditions ranging from low back pain to whiplash, neck pain and headaches are managed by chiropractors with the device. Dr. Epter is also able to treat extremity conditions such as carpal tunnel syndrome, shoulder problems and foot pain such as plantar fasciitis with this technology. Chiropractic care is a covered health care service by most major insurances including Medicare.

New technology and research have paved the way for chiropractic’s advancement in recent years. Doctors of chiropractic are licensed in every state in the USA and in many countries around the world and comprise the largest profession under the Alternative Medicine umbrella. It’s estimated that over 629 million visits are made each year to Alternative Medicine Providers in the US alone, representing more visits than to primary care physicians. Satisfaction with chiropractic care is very high among chiropractic patients, one reason why over 40% of physicians refer to chiropractors today.

Dr. Epter commented, “It’s clear that Chiropractic care is part of a growing natural approach to health care to meet the needs of today’s better educated patient. The Impulse iQ computerized adjusting technology is further evidence of our commitment to provide the best quality care to our patients in the community.”

The Impulse iQ Adjusting Instrument® is an ISO 13485 Certified and UL® Listed and FDA registered medical device. Neuromechanical Innovations instruments are now in use in over 6,000 chiropractic offices across the United States and in over 40 countries internationally. Dr. Epter joins an elite group of progressive chiropractors to incorporate this computerized chiropractic technology. Dr. Epter’s office is located at 100 West Indiantown Road in Jupiter, FL, 33458. Call 561-575-4400 to make an appointment.
