

Weight Loss Formulas

1
formula

Slim-Vite™

*These tablets provide basic RDA-level support, as well as the vital vitamins and minerals needed to support the metabolic pathways that convert stored body fat to readily available fuel source. The formulation is designed for easy digestion and absorption to minimize waste.

3
formula

Metabolic Heat™

*This formulation was designed for patients with minimal health problems. Metabolic Heat™ is intended suppress hunger between meals, increase your metabolism and reinforce the thermogenic activity in your body. Bitter Orange contains alkaloids such as synephrine and octopamine, which stimulate breakdown of fat (lipolysis) and increase the resting metabolic rate in some people, thus increasing the removal and oxidation of fat from storage. This action is enhanced by methylxanthines, such as the caffeine present in Guarana. Ginkgosides from Ginkgo dilate blood vessel, and improve peripheral and brain circulation. The Ginseng can optimize liver metabolism making the utilization of oxygen for energy producing processes more efficient.

5
formula

Carb Shield™

*Carb shield™ was formulated to shield and block the digestion and absorption of carbohydrates. The Phaseolus vulgaris contains an inhibitor of alpha-amylase, an enzyme that promotes the breakdown of starch in the human gastrointestinal tract. Ingestion of this inhibitor can reduce the digestion of starch in foods so less sugars are absorbed. Under ideal conditions Carb Shield™ is able to block the absorption of up to 100 grams of starch thus reducing the caloric content of a high carb meal by up to 300 kilocalories.

2
formula

Fat Mobilizer™

*Our EFAs are specifically designed for use in weight loss and are enteric-coated so there's no fishy aftertaste, and they are verified contaminant-free. Ensuring optimal essential fatty acid status is perhaps one of the most important actions for those on weight loss regimes; it also optimizes thermogenesis and the response to the diet. By providing the omega-6 and omega-3 essential fatty acids in the correct form, the right amounts and the optimal proportions is a prerequisite that must be met if the product is to significantly improve results.

4
formula

Metabolic Boost™

*This formulation was geared towards patients that have significant health issues that would typically inhibit them from using any thermogenic supplements. This product was formulated for people sensitive to the effects of caffeine. Bitter Orange contains synephrine and octopamine, that stimulate breakdown of fat and increase the resting metabolic rate in some people. L-tyrosine, is an amino acid precursor for norepinephrine, the main mediator of thermogenesis.

6
formula

Metabolic Inferno™

*This formula is our most thermogenic formula. It was designed for patients with no preexisting health problems. Metabolic Inferno™ is intended to increase your metabolism and breakdown fat.

This formula may stimulate the pathways in your brain to understand you have finished eating and that you are satisfied so you are not overeating at a meal or looking for something else to eat shortly after completing the meal. Most overweight people have a blunted response to eating and never really feel satisfied after eating. Metabolic Inferno uses botanical extracts to support two areas of human physiology that help regulate control of body weight: the central nervous system and the peripheral energy-generating systems. These share some of the same neurotransmitters, dopamine and noradrenaline (norepinephrine) and can thus be supported simultaneously and beneficially in terms of assisting weight loss.
