

Doesn't this sound like something you would want for yourself in order to predict, with certainty, what is needed and wanted by the body to get you to the next stage of improved health?

How do we access the Nutrition Response Testing™ reflexes in order to get this information?

If I were to hook you up to an electro-cardiograph machine and take a reading, that would make perfect sense to you, right?

What is actually happening during this procedure? Electrical energy from the heart is running over the wires. This electrical energy makes the electrocardiograph record the energy pattern in the form of a graph or chart. I could then study this graph and tell you what it all means.

Here is what we do with Nutrition Response Testing. Instead of connecting electrodes to the specific points being tested, the Nutrition Response Testing doctor contacts these points with his/her own hand. With his other hand, he/she will test the muscle of your extended arm. If the reflex being contacted is active, the nervous system will respond by reducing energy to the extended arm, and the arm will weaken and drop. This drop signifies underlying stress or dysfunction, which can be affecting your health.

Why is the person who referred you feeling better?

Because we did a Nutrition Response Testing analysis for him or her, we found the "active" reflexes, and then made specific nutritional recommendations to help the body return to an improved state of health.

We are prepared to do the exact same thing for you now. Isn't that exciting? However, the best is yet to come.

The second part – the "Personalized Health Improvement Program"

Let's say the liver or kidney reflexes are active. Then what?

Our next step is to test specific, time-tested and proven, highest-possible quality nutritional

formulas against those weak areas, to find which ones bring the reflexes back to strength.

Our decades of clinical experience tell us that when we have found the correct nutritional supplements, as indicated by this procedure, and when we work out a highly personalized nutritional supplement schedule, we have accomplished the most important first step – correcting the underlying deficiency or imbalance that caused the reflex to be active in the first place. By following the program as precisely as possible, you are well on your way to restoring normal function and improving your health.

It's that simple!

In medicine, the medical doctor makes a diagnosis and then uses drugs or surgery to attack or suppress the symptom, or to surgically remove the "offending" organ or part.

In Nutrition Response Testing™ we use "DESIGNED CLINICAL NUTRITION" to correct the cause of the problem, so that the body can regain the ability to correct itself.

What exactly is DESIGNED CLINICAL NUTRITION?

First of all, Designed Clinical Nutrition is not 'over-the-counter' vitamins. Over-the-counter vitamins are pharmaceutically engineered chemical fractions of vitamin structures reproduced in a laboratory. They are not "whole food," and the body does not actually recognize these as anything even vaguely beneficial (to put it mildly). Please ask about our audiotape: *"The Whole Truth About Vitamins,"* for an entertaining, in-depth explanation of this aspect of vitamins and other nutritional supplements.

Because they are not made from whole food, "over-the-counter" vitamins lack the essential synergistic elements normally present in WHOLE foods.

An example of a whole food could be carrots. Carrots are high in Vitamin A Complex. "complex" is something made up of many different parts that work together. Synthetic vitamin A does not contain the whole "Vitamin A Complex" found in nature. So, if we were looking for a food high in Vitamin A, carrots might be one of our choices.
