

If one actually were deficient in any of the components of Vitamin A Complex, one would be wise to seek out a supplement that was made from whole foods that were rich in this complex - not from chemicals re-engineered in a laboratory to look like one little part of the Vitamin A Complex that has erroneously been labeled as "Vitamin A."

Vitamins that are being used all over today generally only need to have a small percentage of their actual content derived from natural sources to be labeled "natural". If they are not derived from whole foods, they often make you even more deficient and nutritionally out-of-balance. They can create other health problems because they do not contain all of the co-factors found in nature that make the vitamins work.

So-called "scientific research," done with these shoddy substitutes, repeatedly "proves" that vitamins don't do much good for anyone! Can you imagine who pays for these "researches"?

"Designed Clinical Nutrition" is exactly that: **designed** (*especially prepared based on a specific plan*) **clinical** (*pertaining to the results gotten in clinical use or actual practice on huge numbers of patients over many years*) **nutrition** (*real food, designed by nature to enable the body to repair itself and grow healthfully*).

It is whole food in a tablet, capsule or powder, concentrated in a vacuum, cold-process system that preserves all of the active enzymes and vital components that make it work as the Creator intended. These real food supplements have been designed to match the needs of the body, as determined by the positive response shown when tested against the active Nutrition Response Testing reflexes that were found on your individual Nutrition Response Testing analysis. These are nutrients you are simply not getting, or not assimilating, in your current diet.

These deficiencies may be due to your past personal eating habits and routines, but it is for sure due, in some large extent, to the lack of quality in the foods commercially available in grocery stores or restaurants today.

### SUMMARY

1. Through an analysis of your body's reflexes, we help you to determine the exact nutrients you need

to supplement your diet, in order to bring about balance and better health.

2. We make these highly concentrated therapeutic formulations available to you in tablets, capsules or in powdered form to "supplement" your current diet. That's why they are called "food supplements."

3. Depending on your individual situation, you might also require that you make some specific changes in your diet & eating habits, and in your routines, in order to bring about the best possible results.

### How are these products produced?

One example of a designed clinical nutrition supplement that we use is called "Catalyn". This product is produced by starting with a wide variety of carefully chosen organically grown vegetables, taking the water and fiber out using a vacuum, low heat process - without heating or cooking the vegetables, and then utilizing the concentrate food to make a bottle of Standard Process Catalyn Tablets.

The key to this whole procedure is the way it is done, using the "Standard Process" method:

A. Standard Process nutrients are derived from plants grown on their own farms, in soil free of pesticides - and no chemicals are ever used. Ph.D.'s check the soil before the seeds are sown, make sure of the fertility of the soil - and even the weeding is done by hand.

B. The machinery involved in the processing of these products is made of glass and stainless steel only.

C. The temperature used in processing harvested plants is never raised above the point of 90 degrees Fahrenheit, so that the active ingredients are not cooked; they remain active and alive, and have a very long shelf life.

Your vitality and energy is derived from live foods. Most foods today are all dead - or are not real foods at all - as in boxed cereals, canned vegetables, soda pop, etc. You can readily understand the difference between dead, devitalized pseudo-foods, with the synthetic isolated vitamins on the one hand, and "Designed Clinical Nutrition" and a diet of real foods, on the other.
