Damaged Myelin
Fiber Exposed

ReBuilder
Treatment for all Neuropathies

The bottom right section of the advertisement features a photograph of a person's leg in blue jeans, with a hand resting on the knee. To the left of the leg is a diagram of a neuron with a yellow cell body and branching fibers. One fiber is shown with a blue sheath labeled 'Damaged Myelin' and a section where the sheath is missing, labeled 'Fiber Exposed'. To the right of the leg is a smartphone displaying the ReBuilder app interface, which includes a 'Frequency' slider and two 'Intensity' sliders. Below the phone is a small, light-colored mesh device. At the bottom right, the text 'ReBuilder Treatment for all Neuropathies' is displayed in white on a dark blue background.

HOW DOES IT WORK?

ReBuilder- Neuropathy and knee pain treatment

ReBuilder is a highly sophisticated computerized medical device that alleviates pain with no side effects. The ReBuilder calms overactive nerves, stimulates underactive nerves, strengthens muscles, and increases local blood flow. When used for knee therapy, it can prevent disuse muscle atrophy, a common side effect of surgery. In many cases, direct electrical stimulation with the ReBuilder can completely avoid knee surgery.

Knee pain can result in replacement surgery with titanium joints. The ReBuilder, when used prior to such surgery, can prepare your knees and lower legs for faster healing after surgery, and when used post operatively, can reduce the need for addictive drugs for pain control, and aid in faster recovery of range of motion, etc.

The ReBuilder is not a common TENS device that simply blasts your nerves so your brain cannot perceive the pain. These devices, by their very nature, cause permanent numbness, like standing in front of a blaring train horn all day can destroy your hearing. These devices overload your brain with huge signals 90 to 10,000 times per second in addition to the uncontrolled large voltages and current they use. If your Doctor recommends these dangerous devices, cheaply made in China, we recommend that you change doctors.

Peripheral neuropathy is a progressive disease and can lead to amputations and a life in a wheelchair. If your Doctor recommends drugs for pain, they cause numbness (that's how they work), and can cause addiction and life-threatening side effects.

Approved for:

- Relaxation of muscle spasms
- Prevention and retardation of disuse muscle atrophy
- Muscle re-education
- Immediate post-surgical stimulation to calf muscles to prevent deep vein thrombosis
- Maintaining and increasing range of motion
- Symptomatic relief of chronic pain

What does the ReBuilder do?

When first turned on, ReBuilder evaluates your body's electrical state and it then sets itself for your safety. It can tell the difference between a 100 lb lady and a 300 lb. athlete. Thus, it is self-limiting. It then sends a healthy nerve signal from foot to foot (or hand to hand) and then goes quiet to listen to the self-generated response to that signal that the body sends up to your brain. It copies and evaluates that (dysfunctional) signal and compares it to a proper signal and creates a custom compensating signal, like a pacemaker does for your heart signal. It then sends this signal 7.83 times a second to gently coax your nerves to relearn how to send a healthy signal that can reach the brain. When used simultaneously with the warm water foot bath, the warm water expands the blood vessels in your feet and ankles (vasodilation) to allow more blood to reach your nerves and skin. This is especially beneficial for people suffering from diabetes.
